Ms. Liv Haugen is a registered professional engineer, project manager, and Denver Operations Leader with CH2M in Englewood, Colorado. She graduated from Colorado State University with bachelor of science degrees in bioresource engineering and chemical engineering in 2000 and a master’s degree in bioresource and agricultural engineering in 2002. Liv has spent the majority of her career with CH2M focusing on water delivery and wastewater conveyance projects that include condition assessment and rehabilitation, implementation of renewable water supplies, and regional management of wastewater. Her experience includes consulting services for municipal clients, including project management, planning, design, and construction services. As an operations leader for CH2M, she has responsibility for the Denver office water business group staffing and project portfolio.

Liv’s engineering focus is in providing conveyance design services to promote renewable and safe drinking water supplies and effective wastewater management in the western U.S. She enjoys providing these valuable services in the local area, including successful design and management of large diameter pipeline projects, condition assessment, and water resources storage and supply. Her passion is in the engagement and encouragement of young professionals to expand their experience and roles in the industry.

Abstract:

Liv will provide an overview of consulting services for municipal clients with an emphasis on water, wastewater, and stormwater. Liv will discuss the value that consultants bring to municipal clients and the career opportunities this presents to engineers in the industry. She will also talk about the CH2M career development framework and ways for young and new professionals to engage in the industry for networking and personal growth.
